

Invention description iCap

The iCap Music System is an incredible invention. It is a cap that plays your favorite tracks. With it you can hear fabulous music without the risks of having terrible hearing problems due to wearing uncomfortable earphones and traffic hazards due to not hearing vehicles while hearing music with earphones. It can be used by the whole family and is very simple to use. You just have to put it on, select the music you want, hit play and start grooving. It conserves your precious space because it perfectly fits your closet.

Unfortunately, the only thing the iCap does is play Music. The new Mega Cap is changing that. The Mega Cap not only plays music, it also has Bluetooth connection that works with any iPod Touch, iPhone, iPad or notebook computers with Bluetooth. In other words, it works as a Bluetooth amplifier to amplify the sound of your device. You can listen to the songs in the library of your Mega Cap or hear all the songs in your music device. The Mega also prevents hearing and safety problems like the iCap and still can be enjoyed by the whole family. The Mega Cap is very simple; you just plug in your iPhone and do what you normally do to select a song. Anybody can operate the Mega Cap. This version comes with different designs of your choice that people will like. The Mega Cap is an invention everybody should have.
